Težave

- V primeru *hekanja* modema operater *ne bo vesel* porabljenega časa za podporo
- Neha delovati, ko operater hoče spremeniti nastavitve, pa TR-069/SNMP ne deluje (ponavadi je restart za nekaj sekund dovolj za ponovno vzpostavitev)
- Na modem lahko nekdo naloži zlonamerno programsko opremo in ga vrne operaterju

Beseda o SPF

- *Small form-factor pluggable*
- Na njem teče lastniška koda in OS (Linux)
- ONU
- Standardizirana komunikacija, ki pa ni *ethernet*
- Ponavadi za uporabnika proti plačilu

Ideje za prihodnost

- Kloniranje modema (oz. S/N)
- Preizkušanje, kaj se zgodi, ko se na priključku pojavi nepričakovan S/N
- Implementacija TR-069 in SNMP strežnika, ki posluša zahteve operaterja
- Prošnja operaterju/proizvajalcu za izvorno kodo GPL orodij
